The IMAGERY ANALYSIS SERVICE NOTES is a periodic publication of the DDI Imagery Analysis Service, the departmental PI organization of CIA.

This publication highlights significant or timely intelligence items derived from photography.

The interpretations in this publication represent preliminary views which are subject to modification in the light of further information and more complete analysis.

## WARNING

This document contains information affecting the national security of the United States within the meaning of the espionage laws U. S. Code Title 18, Sections 793, 794. The law prohibits its transmission or the revelation of its contents in any manner to an unauthorized person, as well as its use in any manner prejudicial to the safety or interest of the United States or for the benefit of any foreign government to the detriment of the United States. It is to be seen only by personnel especially indoctrinated and authorized to receive information in the designated control channels. Its security must be maintained in accordance with regulations pertaining to TALENT-KEYHOLE Control System.

North Vietnam

Modification of Dual Gauge Rail Line

25X1D

Since [ ] we have observed the meter-gauge Dong Dang to Hanoi rail line being converted to dual gauge (standard and meter) by the addition of a third rail. The dual-gauge arrangement permits a direct link between the North Vietnamese meter-gauge and the Chinese standard-gauge rail systems, without the need for transloading at the border (see Figure 4).

25X1D

[ ] photography has revealed still a further modification which may permit the use of three gauges on the Dong Dang to Hanoi rail line.

At several points between Kep and Yen Vinh, a fourth rail is being added between the old meter-gauge rails (Figure 5a). This would apparently permit the use of a meter gauge (with two track configurations), a standard gauge, and a narrow gauge as illustrated in Figure 5c. Several dual-gauge switches in the yard just north of Yen Vinh may possibly have an added fourth rail. This four-track configuration has also been observed at two locations where the original meter gauge had not yet been converted to dual gauge (Figure 5b). To date, no narrow-gauge rolling stock has been observed in North Vietnam.
